

ANKITA MANNA

AI Full - Stack Developer

Email: ankitamanna2003@gmail.com

GitHub: [Ankitaa-Mannaa](#)

Contact No: 9433945463

TECHNICAL SKILLS

Programming Language: Python, JavaScript, PHP

Frontend Development: React, Next.js

Backend Development: Node.js, Express.js, Django, Flask, FastAPI, REST API Development

Databases: MySQL, PostgreSQL, MongoDB, Supabase, Firebase, Pinecone, FAISS, ChromaDB, Weaviate

AI / Machine Learning / GenAI: LangChain, LangGraph, LLM Integration & Fine-tuning, RAG, Vector Search & Embeddings, Vertex AI, Meta AI tools

Integrations & Tools: Stripe, PayPal APIs, CopilotKit, Firebase Authentication (Google & Facebook OAuth)

Cloud & DevOps: AWS (EC2, Lambda), Cloudflare, Azure (Container Apps, Container Registry, Azure CLI), Docker

WORK EXPERIENCE

AI Full stack Developer | Excellence Technologies Pvt. Ltd. | Full-time

July 2025 - Present

- Developed AI-powered applications using RAG architecture, LLMs, and vector databases for intelligent search and automation.
- Built multi-agent workflows with LangGraph, Applied LLM fine-tuning, prompt engineering, and performance optimizations for improved accuracy.
- Engineered scalable backend with Flask, REST APIs, JWT auth, MySQL and interactive frontend using React.js.

Machine Learning engineer | Intern | IIT – Delhi

Dec 2024 - Jun 2025

- Worked with Big Data for Analysis & Cleaning
- Built Advanced Machine Learning Models and Deep learning models – Time Series Forecasting models.
- Developed and worked with several automation model for web scraping

TECHNICAL PROJECTS

Flock - Scalable Content Creation & Streaming Platform

[LINK](#)

- Developed a scalable full-stack creator platform with role-based access control, enabling video/blog publishing, social engagement, and personalized content feeds.
- Engineered frontend using Next.js, React, TypeScript, Redux Toolkit, and backend using Flask, PostgreSQL, Redis, Celery, following RESTful API architecture.
- Implemented rich media workflows, async processing, caching strategies, and real-time engagement features (follow, like, comment, analytics dashboards).
- Integrated Cloudflare Stream, Stripe Connect, and PayPal APIs for video processing, creator monetization, and automated payout systems based on watch-time analytics.

Cuvaide Multi-Agent AI: An Intelligent winery operations automation engine.

[LINK](#)

- Built a Python FastAPI + LangGraph multi-agent AI service for winery operations automation.
- Designed and implemented specialized agent routing and stateful workflow execution with confirmation-driven tool execution.
- Integrated LLMs through LiteLLM (Anthropic/OpenAI model routing, fallback, token-aware behavior).
- Implemented secure Rails backend integration using async HTTP clients and JWT-based user context propagation.
- Added production capabilities including streaming responses, rate limiting, retry/error handling, and Docker/Azure deployment readiness.

Verifisert – Intelligent Automated Compliance & Quality Review System

[LINK](#)

- Built an AI system to analyze building inspection PDFs and automate compliance checks, reduced manual review effort by ~60% using RAG + rule-based parsing
- Built a scalable FastAPI backend (PostgreSQL, SQLAlchemy, Alembic) with hash-based caching, AWS S3 storage, and SQS + Lambda pipelines for high-throughput asynchronous processing.
- Integrated AWS Bedrock (Claude Sonnet, Titan embeddings), Pinecone vector DB, and OpenAI, enabling standards-aware semantic retrieval and reliable AI inference.
- Developed a Next.js 14 + TypeScript frontend with Google OAuth and Stripe, delivering secure workflows for PDF upload, payments.

RESEARCH PROJECTS

Multidirectional imputation technique Model for filling gaps (IIT-D)

Jan - 2024

- Built an AI-powered imputation pipeline using TCNs and LSTM-based autoencoders for time-series data imputation, improving the reliability of missing data reconstruction.
- Applied advanced preprocessing (Z-score normalization, resampling, cyclical features) to improve model performance.
- Optimized large-scale data handling with GPU acceleration. Automated missing data reconstruction.

CERTIFICATIONS

Data Analytics with Python | IIT Roorkee (NPTEL)

May - 2025 [Link](#)

Introduction to Database Systems | IIT Madras (NPTEL)

May - 2025 [Link](#)

EDUCATION

Graduation

B. Tech CSE - AI, Jamia Hamdard University

CGPA: 7.8
